AutoBlog Studio — Fully Automated Workflow

Configure each website once. The system researches, writes, checks, schedules, and publishes continuously.

ONE-TIME SETUP

1 **Add website and automation settings**
URL · audience · brand voice · article volume · budget · publishing schedule · Delivery API

AUTOMATIC CYCLE

2 **Scheduler checks every enabled website**
Each website runs independently

Slot and budget available?
No — wait

Yes

3 **Inspect the website**
Understand services, audience, existing articles, and approved internal links

4 **Discover and screen a topic**
Google Search · usefulness · search intent · duplicate prevention

5 **Research with grounded Google Search**
Collect factual evidence and at least two usable source URLs

6 **Write a structured article with Gemini**
Title · answer · sections · FAQs · table · metadata · references · internal links

Quality, safety, source, and structure checks pass?
Deterministic validation

No

Automatic repair
Fix listed issues, then recheck

Yes

7 **Schedule and publish through REST API**
The connected website fetches and displays the published article

8 **Record activity, usage, cost, sources, and status**
Temporary failures retry automatically with bounded backoff

No routine human input · Repeat for every enabled website
